A Chance to Buy the Famous AMERICAN GIRL SHOE At a Sacrifice.

For the first time in the history of this celebrated footwear it is now being retailed by us at less than its stamped price, which appears plainly on the sole of every shoe. Our stock of this footwear includes all of this season's most fashionable shapes, purchased by us direct from the manufacturers. This is your first and last chance to buy this footwear at sacrifice prices.

LADIES' OXFORD TIES.

LADIES' HIGH SHOES,

Should any of these shoes fail to give satisfactory wear, we will replace them with a new pair free. A box of dressing, made expressly for the "American Girl Shoe," free with every pair. Special offerings from our regular stock will be found on our bargain tables tomorrow. . Saturday is always children's day, and we have provided a host of specials for the little folks.

FAMILY SHOE STORE, 310 and 312 Seventh Street.

THE QUESTION 93. WHETHER THE SOUTH POLE IS SEA OR LAND.

Four Expeditions Are Fitting Out-Scientific Mission of the Discovery and Gauss.

50 ni

From the Literary Digest. It is not so many years since our almost total ignorance of the South Polar regions was justly regarded as a reproach to geographers. This has been in part removed, and indications are that we shall soon be well informed in antarctic geography. Writing in the American Monthly Review of Reviews on "New Phrases of Polar Research," Cyrus C. Adams tells us that the most thoroughly equipped, most costly, and most scientific of all polar expeditions are about to make their way to the unknown antarctic. He goes on to

"Pioneer explorers will gather there the highest honors that are yet to reward geographical research. The largest un-known area on the globe awaits them. The diameter of the unknown region around the North Pole is only 1,500 miles, but around the South Pole it is 4,000. The area which, so far as we know, has never been seen by human eye is twice as great

area which, so far as we know, has never been seen by human eye is twice as great as that of Europe.

"The most interesting of the discoveries to be made around the South Pole will be the determination of the question whether there is really a large continent at the southern apex of the world. Some of the leading authorities believe it is there, and that we are not likely to be much longer in the dark about it. Dr. John Murray, among others, has expressed the view, merely conjectural, of course, that the merely conjectural, of course, that the area of the antarctic continent is about 4,000,000 square miles, or, in other words, as large as Europe; or a third larger than the United States, exclusive of Alaska."

Making Ready for the Search. Four expeditions will make south-polar explorations. The two largest are the German and British expeditions, which have been planning for six years. They are supported by government grants amounting to about \$250,000 apiece and by private contributions of about \$100,000 additional. Each has built a steamship, and they have agreed upon their distinct fields of investi-

gation.

The German vessel, launched at Kiel on April 2, was named Gauss, in honor of the brilliant physicist who, in the early part brilliant physicist who, in the early part of the last century, conjecturally located the south magnetic pole. The vessel will be coaled and provisioned for three years, when she starts for the remote French island of Kerguelen. From this point expeditions will be started toward the pole. The Discovery, the British ship, was launched at Dundee March 21, her cost being \$225,000. With five naval officers, five scientific specialists, and twarts. in the crew, she is bound for Victoria Land. with three years' supplies, and camp is likely to be pitched on Cape Adare. The English have never used dogs to any large extent, and only twenty of them will be

Expedition to Weddell Sen. There are also two smaller expeditions;

one sent out by the Scotch, who will oc-cupy the region known as Weddell sea, where it will endeavor to find and explore the coasts of that side of the hypothetical continent, and another under the command of Dr. Otto Nordenskjold, a nephew of the distinguished arctic explorer. It is said that Dr. Nordenskjold will endeavor to establish a station on the east side of Graham Land, and try to ascertain whether that large region is an island or merely a promontory of the continental mass. Mr. Adams goes

on to say, in conclusion:

"The results are likely to be almost wholly of scientific interest. Even if large lands are found, they have probably no commercial value. No coal or other minerals have been discovered; if they exist, they are perhaps buried too deep under snow and ice to be ever available. Antarctic seals and whales have had economic importance, but the useful varieties seem importance, but the useful varieties seem to have become practically extinct. Whaling, resumed within a few years past, had no results that encouraged further effort. There is little doubt that better knowledge of antarctic meteorology will be of distinct advantage to navigation along the most southern routes around the world, and this may be the only 'practical' issue and this may be the only 'practical' issue

"The scientific basis for antarctic exploration is, nowever, too substantial to need any bolstering. Physicists tell us that south of 40 degrees S. latitude there is a gap 'in our knowledge of the elements required for our knowledge of the elements required for the complete expression of the facts of terrestrial magnetism.' Scientific men like Dr. Neumayer, Sir John Murray, and many others say that 'until we have a complete and continued series of observations in the and continued series of observations in the antarctic area, the meteorology of the world cannot be understood.' It is to find new lands and study the problems of biology, geology and many other phenomena to be observed in this vast area that four expeditions are to visit it. The money they cost will be well spent if they may add something to our knowledge of the world we live in."

STELLAR DISTANCES.

Scientific Suggestions That Indicate From the Atlantic Monthly.

fixed stars is Alpha Centauri, the brilliant 275,000 times farther than the sun. One of the next nearest stars is Sirius, which is about 500,000 times the sun's distance. These distances correspond to the spaces traversed by a ray of light in four and eight years, and hence we see these two brilliant stars as they shone four and eight years ago, respectively. The smallest angular magnitude which can be certainly measured in the greatest modern telescope measured in the greatest modern telescope is five one-hundredths of a second of arc, and this corresponds to the paralax of a star at a distance of sixty light years, or the angle subtended by a human hair, assumed to have a diameter of one-thousandth of an inch, at a distance of 350 feet. Hence it follows that all stars removed from us by more than sixty light years have parallaxes too small to be detected even by the most refined methods of modern research, and we can at best merely guess at their distances. As the near star, guess at their distances. As the near star, Alpha Centauri, is only four light years distant, while some of the known stars are fifteen times as remote, it seems probable that all those stars which have a measurdistant, while some of the known stars are fifteen times as remote, it seems probable that all those stars which have a measurable parallax are very close to us, compared with the distances of the more remote objects. If we suppose the average star to be fifteen times as remote as those objects having the smallest measurable parallax the average distance would be about 900 light years. As this estimated distance is probably, too small, it seems certain that the multitude of stars are removed from us by more than 1,000 light years, or 250 times, the distance of Alpha Centauri. We may reckon that in all probability the most remote regions are ten times more distant from us than the nearest portion of the galaxy, and hence that our telescopes probably penetrate regions lying so remote that light from the most distant objects would not reach us in less than 10,000 years. What we see in these border regions of the universe is not the events now transpiring there, but phenomena as they were 10,000 years ago, or before the beginning of human history.

The rays that reach our eye from different portions of the sky thus started in different phases of the development of the universe; those from the mearer portions more modern cosmical history. Even if all the creation began at the same time and progressed uniformly our view of it would be altered by the time required for the propagation of light across the immense spaces by which we are removed from other portions of the universe. And as all the stars probably did not begin to develop at the same time it is natural that we should see all stages of world development now going on in the heavens. It is worthy of remark that if we imagine a sufficiently powerful sensitive and perfect set of eyes placed in a cluster of the Milky Way, at a distance of 5,000 light years, and directed toward the earth, the ethereal throbs falling upon them would reveal history as it was 5,000 years ago; and if these eyes should move toward the earth they would witness all human history as it was

This Great Double Event in Men's Suits.

Choice of the small lots of OUR regular \$20, \$22.50 \$10.00

Choice of OUR regular \$10, \$12.50 and \$15 Suits for ---

The talk of the town-the opportunities of the season. With Saks Clothing conceded by everybody to be by far the best-such special selling of it naturally and certainly eclipses all other offerings. The values are superior-while the special prices both offer GREATER-GREATEST saving.

In each choice you are assured only fresh, new styles of this season's make—Suits that are suitable in weight for wear now—and OUR making at that.

In the \$10 sale are all the lots of the finest grades up to \$25, of which only six Suits or less are left-Fancy Cheviots, Fancy Worsteds and Cassimeres, Fancy Flannels-Plain Blue Serges and Plain Black Thibets. Some of the Serges are double breasted and silk faced. There are two or three lots of Cutaways. All the others are Single-breasted Sacks-military or conserva-

In the \$6 sale the lots are larger-but the ratio of value and saving is about the same. These Suits are the ones that have been selling at \$10, \$12.50 and \$15-and include handsome, exclusive Fancy Cheviots, Worsteds, Cassimeres, Tweeds, Homespuns-plenty of choice patterns in "Featherweight" Flannels, Plain Blue Serges and Plain Blue and Black Cheviots. They are Single-breasted Sacks of the most popular cuts.

The Boys Reap a \$6 Harvest.

We shall put on sale tomorrow morning in the Boys' Clothing Department a parallel for the Men's \$6 Sale. The assortment will consist of Fancy Cheviots, Fancy Unlined Flannels, Plain Blue Serges and Cheviots, that have been selling at \$10, \$12.50 and \$15. The sizes range from 14 to 19 years—but small men can be fitted as well.

A Neglige Shirt Wonder— "\$1.05 Sale."

We called into competition every leading Neglige Shirt maker in America and asked them to submit samples of the best Shirt they could make - skimping neither in quality of material nor character of workmanship. The skimping we were to do in the selling price. We promised a large order—but the Shirt to win it must be a paragon of perfection.

We place the successful Shirt on sale tomorrow morning. There's a choice of a dozen patterns, including plain White; the material is imported madras; the seams are felled, the buttonholes are hand made; the fit perfect; with each Shirt is a pair of separate cuffs to match.

In actual value we are offering a \$1.50 Shirt -exclusive Haberdashers would mark them even higher. But we introduce what will be an annual feature of this Furnishing Goods Store of

The "Dollar-Five" Neglige.
